

# Calculate your personal carbon footprint

- Every day we use resources that have an impact on the environment eg travel, heating, food and household appliances
- By calculating your carbon footprint you can identify areas where you can reduce your carbon impact
- Many calculators are available, all based on the same principles
- Try the WWF [footprint calculator](#) to see where you can save £s and carbon emissions
- By using a carbon footprint calculator, you'll see how your small changes can make a big difference.

## Action #27

### Understand your carbon footprint
